HASIRU AGRO

E-Commerce Website & Farm Development Platform

Detailed Functional Requirements – Vendor Draft

1. WEBSITE HOME PAGE

The Home Page should be designed as the primary entry point for two types of customers:

Customers who already know which plants they want.
Customers who need help selecting plants.

The website should be **mobile-first**, with horizontal scrolling product/content sections similar to modern e-commerce platforms.

1.1 MAIN SECTION – CUSTOMER ENTRY

The first section should prominently display two options.

OPTION 1 – I KNOW WHAT I WANT

For customers who already know which plants they require.

CTA:

I Know What I Want

Clicking this option redirects the customer to:

Shop Page

Flow:

I Know What I Want → Shop page → Select Plants → Recommend inputs for plants → Cart → Checkout

OPTION 2 – HELP ME CHOOSE THE PLANTS

For customers who need Hasiru Agro's assistance in selecting plants.

CTA:

Help Me Choose

Clicking this option redirects to the **Help Me Choose** workflow.

Flow:

Help Me Choose → Customer Inputs → Generate → Plant Recommendations

1.2 SECOND SECTION – PLANTS / BEST SELLERS

The second section of the Home Page should showcase the main/best-selling plants.

The presentation should be similar to Zepto, Blinkit - style product carousels.

Display

Products should be displayed horizontally:

← Product 1 | Product 2 | Product 3 | Product 4 | Product 5 →

The customer should be able to:

Swipe horizontally on mobile.
Scroll horizontally.
Use navigation arrows on desktop/tablet.
Click a product to open its product details.
Add a product to cart.

Product Card

Each card should display, as applicable:

Plant image
Plant name
Plant category

Plant height
Plant description ,
Exposure preference
Rain preference
Temp preference
Packet Weight
Price
Offer/discount price
Availability
Add to Cart
View Product

Section CTA

View All Plants

Example: 9 ft × 9 ft → 43,560 ÷ (9 × 9) = 538.27 → approximately 538 plants per acre.
Example: 10 ft × 10 ft → 43,560 ÷ (10 × 10) = 435.6 → approximately 436 plants per acre.
Formula: Number of plants per acre = 43,560 ÷ (spacing length × spacing width).
Customer enters spacing as length × width in feet.
The Simple Plant Calculator should also be available as a floating calculator/button on the Home Page.
Placement: Immediately after the Plants / Best Sellers section on the Home Page.
1.2A SIMPLE PLANT CALCULATOR

1.3 THIRD SECTION – INPUT PRODUCTS / BEST SELLERS

This section is for products associated with plantation inputs.

The main input products should be displayed in an quick commerce-style horizontal scrolling carousel.

Main Input Categories

Compost
Seeds
Biochar

Liquid fertilizer
Bio-Pesticide

Display:

← Compost | Seeds | Biochar | Product 4 | Product 5 →

The actual products shown should be configurable from the Admin Panel.

Product Card

Each product should display:

- Product image
- Product name
- Product type
- Price
- Offer price, if applicable
- Availability
- Add to Cart
- View Product

1.4 COMPOST CALCULATOR

A dedicated Compost Calculator should be available as part of the Home Page.

Customer should be able to enter the required parameters and obtain an estimated compost requirement.

Basic flow

```
Compost Calculator
```

↓

```
Based on plants selected compost is calculated
```

↓

```
Calculate
```

↓

```
Estimated compost requirement
```

↓

Recommended compost product

↓

Add to Cart

The calculation formula will be provided/approved by Hasiru Agro.

1.5 INCUBATED BY UASD DHARWAD

The next section should display a running band:

> **Incubated by UAS Dharwad, recognised by startup india**

The relevant logos should be displayed.

Requirements

Logo/images supplied by Hasiru Agro.
Logos should be properly positioned.
Links may be added if required.
Any institutional wording should be approved by Hasiru Agro before publishing.

1.6 DIY CONTENT VIDEOS

The Home Page should contain a DIY / educational video section.

Main videos should be displayed horizontally.

Example:

← Video 1 | Video 2 | Video 3 | Video 4 | Video 5 →

Customer actions

Play video
Open video
Scroll through videos
View more

Admin

Admin should be able to:

- Add video
- Delete video
- Modify video
- Change video title
- Upload/select thumbnail
- Add video URL
- Categorise video

This section should link to the dedicated Farm Development Services page.
CTA: Explore Farm Development Services
Placement: After the Why Choose Us section and before Testimonials & Reviews.

1.7 WHY CHOOSE US – HOME PAGE SECTION

1.8 TESTIMONIALS & REVIEWS

The Home Page should contain a Testimonials & Reviews section.

Display testimonials in a horizontal scrolling format.

Example:

← Review 1 | Review 2 | Review 3 | Review 4 | Review 5 →

Possible information:

- Customer name
- Location
- Customer photograph
- Review
- Rating
- Farm/project information

Admin should be able to add/edit/remove testimonials.

1.9 LOWER HOME PAGE SECTION

The lower section of the Home Page should provide links to:

- **Explore Farm Development Services**
- **About Us**
- **Contact Us**

These should redirect to their respective pages.

2. WHY CHOOSE US

Dedicated page:

Why Choose Us

The page should communicate Hasiru Agro's differentiators.

Main points:

Plant Authenticity

Explain how Hasiru Agro ensures authenticity/quality of plants.

Domain Expertise

Explain Hasiru Agro's expertise in:

- Plantation
- Farm development
- Plant selection
- Permaculture/agricultural planning

Proven Results

Display actual results/data.

Examples:

- Acres developed
- Number of farms
- Number of customers
- Projects completed

Only actual verified data supplied by Hasiru Agro should be displayed.

Delivery to Farm

Explain the ability to deliver plants directly to farms.

3. PLANTS PAGE

This page is accessed when the customer selects:

I Know What I Want

The objective is normal e-commerce browsing.

3.1 Plant Categories

Plants should be categorised.

Initial categories include:

Timber Trees

Display timber plant varieties.

Fruiting Trees

Display fruit-bearing plant varieties.

Other Plants

Additional categories can be added.

The category structure should be manageable from the Admin Panel.

3.2 PLANT LISTING

Each category should display plants in an e-commerce product grid/carousel.

Each plant should support:

Image
Name

Description
Price
Availability
Quantity
Add to Cart
Product details

3.3 PRODUCT QUANTITY

Customer should be able to:

− Quantity +

Quantity can be increased or reduced before adding to cart.

Use the same calculation: Number of plants per acre = 43,560 ÷ (spacing length × spacing width).
Placement: The Simple Plant Calculator should also be available in the Plant Shop section, with a floating access button/widget.
3.4 SIMPLE PLANT CALCULATOR – PLANT SHOP

4. HELP ME CHOOSE

This is a separate recommendation-based customer journey.

Customer enters the Help Me Choose workflow from:

Home Page
Potentially Plants Page

4.1 CUSTOMER INPUT POP-UP

A popup/form should appear.

The customer must provide:

A. Land Size

Land size can be entered in:

Acres
Square feet

The system should allow the customer to select the unit.

B. Location

Customer can provide location through either:

Option 1 – Map

Select location using a map.

Option 2 – Search

Customer starts typing the location.

The system should provide suggestions after the first few characters.

The exact map/location service can be selected during development.

C. Purpose

Customer selects one of the available plantation models:

Commercial
Food Forest
Miyawaki

The system should be designed so additional purposes/models can be added later.

4.2 CUSTOMER KYC / IDENTIFICATION

Before generating recommendations, customer details should be captured.

Required:

Name
Phone number

Phone number should be verified using:

OTP Verification

The customer should not be able to proceed with the recommendation generation until the required verification is completed.

4.3 GENERATE BUTTON

After entering:

Land size
Location
Purpose
Customer details/OTP

Customer clicks:

GENERATE

The system generates the relevant plantation model/recommendation based on the selected purpose and inputs.

5. PLANT RECOMMENDATION PAGE

After clicking Generate, the customer is taken to the Recommendation Page.

5.1 PURPOSE DISPLAY

The selected purpose should be displayed at the top-left.

Example:

Purpose: Commercial ▼

The customer should be able to change the purpose using a dropdown.

If the purpose is changed, the recommendation should update accordingly.

5.2 GENERATE ALL THREE PLANTATION MODELS

Each generated model should retain its own selected/recommended plants and recommendation details.

Each section should be expandable and collapsible.
Each generated model should be displayed in a separate section.
The Generate action should generate all three models.
- Miyawaki
- Food Forest
- Commercial

The customer should be able to generate models for all three purposes

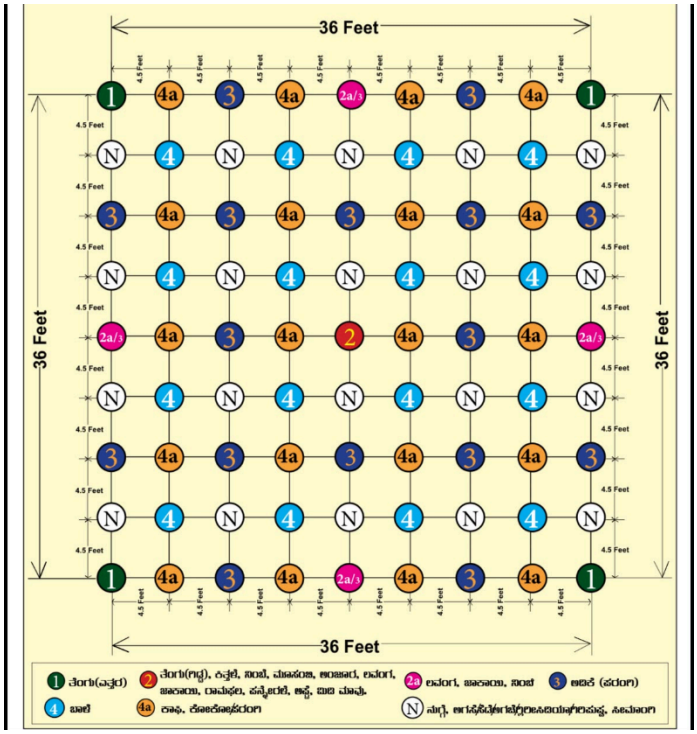

5.3 PLANTATION / RECOMMENDATION DIAGRAM

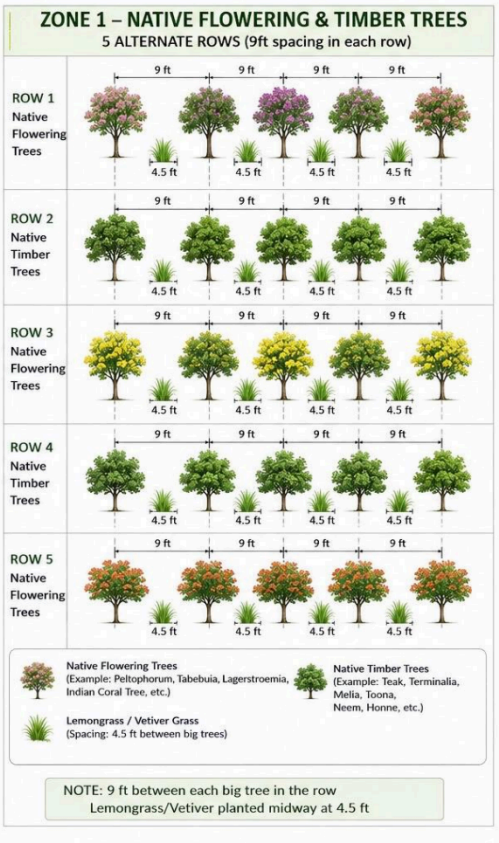

A visual plantation diagram should be displayed.

Standard Diagram

The base diagram should represent:

36 ft × 36 ft

The diagram should visually demonstrate plant placement and spacing.

The diagram should account for the relevant plantation structure, including:

- Host plant
- Biomass plant
- Main plant
- Spacing between plants

The exact planting pattern/design should be provided and approved by Hasiru Agro.

The objective is for the customer to visually understand **how the recommended plants are arranged within the plantation model**.

5.4 TIMBER TREES

A dedicated section should display recommended timber tree varieties.

Example structure:

← Timber Plant 1 | Timber Plant 2 | Timber Plant 3 | Plant 4 | Plant 5 →

Each product should support:

- Image
- Plant name
- Recommended quantity
- Quantity +/−
- Price
- Add to cart

View More

A: **View More**

button should display additional timber varieties.

5.5 FRUITING TREES

A dedicated section should display recommended fruiting tree varieties.

Each product should support:

- Image
- Plant name
- Recommended quantity
- Quantity +/−
- Price
- Add/select

View More

A: **View More**

button should display additional fruiting varieties.

5.6 OTHER PLANT TYPES

Additional plant categories should be displayed using the same structure.

Examples may include other plant types defined by Hasiru Agro.

The system should not hard-code the number of categories.

Admin should be able to add new recommendation categories.

6. RECOMMENDED INPUT CALCULATION

The system should calculate the approximate inputs required based on the plants and quantities selected.

Inputs include:

- Biochar
- Vermicompost
- Other applicable inputs

The calculation should be based on:

Recommended/selected plant quantity + applicable recommendation rules

Example:

500 plants → X kg vermicompost

500 plants → Y kg biochar

The exact formulas should be provided by Hasiru Agro.

6.1 INPUT RECOMMENDATIONS

After calculating the requirements, the system should recommend the corresponding products.

Example:

Recommended for your plantation

- Vermicompost – X kg
- Biochar – Y kg
- Other input – Z kg

Each recommended input should have:

- Product
- Quantity
- Price
- Add to Cart

Customer should be able to modify quantities based on his wish . we just recommend here not mandatory requirement to buy .

7. ADDITIONAL PLANTS

The customer should **not be restricted to only the plants recommended by the system**.

After viewing recommendations, the customer should be able to add any other plant available in the Hasiru Agro catalogue.

Example:

Want to add something else?

→ Browse All Plants

Customer can select:

Recommended plants
Additional plants
Input products

and add them all to the same cart.

8. WATCH VIDEO

The Recommendation Page should contain a:

Watch Video

section.

The video should provide guidance on how to plant/implement the recommended plantation.

The video displayed can be recommendation/model-specific.

Example:

Commercial → Commercial plantation video

Food Forest → Food Forest planting video

Miyawaki → Miyawaki planting video

Admin should be able to associate videos with recommendation models.

9. CART

Additional Items: Any extra plants/products added independently by the customer should be displayed below the Recommended Package in a separate section.
Recommended Package: The recommended plants/inputs should be displayed in a separate section with a different background colour.

Customer can add:

- Recommended plants
- Additional plants
- Compost
- Vermicompost
- Biochar
- Seeds
- Other available products

into one cart.

Cart should show:

- Product
- Quantity
- Unit price
- Discount
- Packing charge
- Transportation/delivery charge
- Applicable taxes
- Final amount

10. CHECKOUT

The checkout process should collect complete customer/order information.

Customer Details

- Name
- Mobile
- Email, if applicable

Delivery Details

Complete address
Location
PIN code
District
State

Delivery Option

Customer should be able to select:

Option 1 – Delivery

Product delivered to customer/farm.

Option 2 – Pickup from Nursery

Customer collects the products from the nursery.

11. GST / TAX CALCULATION

The checkout should calculate applicable GST/taxes according to the applicable product/tax configuration.

The tax structure should be configurable by product/category where required.

Vendor should provide the ability for Hasiru Agro/admin to maintain applicable tax rates rather than hard-coding them.

12. TRANSPORTATION / DELIVERY CALCULATION

Transportation is separate from the product price.

The delivery/transportation charge should consider:

Distance
Plant/product weight
Order quantity

Vehicle capacity
Delivery location
Bengaluru/outstation status
Applicable delivery rules

13. VEHICLE CAPACITY DISPLAY

For applicable deliveries, the website should display the approximate vehicle utilisation.

Example:

Truck Capacity: 65% Full

You can add approximately **35% more capacity** to this delivery.

This allows customers to understand how much additional quantity can be added to the same delivery.

The system should calculate this based on the configured vehicle capacity and product weight/volume rules.

14. BENGALURU DELIVERY

Within Bengaluru, deliveries are planned on a scheduled basis.

Requirement:

Scheduled delivery once a week

The website should show the available delivery schedule during checkout.

The exact delivery day/slot should be configurable by Admin.

15. OUTSTATION DELIVERY

For outstation deliveries, transportation should be calculated separately.

Calculation may be based on:

Kilometres
Weight

Quantity
Vehicle capacity
Destination

The final transportation charge should be displayed before payment.

16. PACKING CHARGES

Packing charges should be calculated separately where applicable.

The system should support configurable packing rules.

Packing charges may be:

Per order
Product-specific
Quantity-based
Size/weight-based

The exact calculation method should be defined by Hasiru Agro.

17. PAYMENT

After the customer confirms:

Products
Quantity
Delivery/pickup
Address
Taxes
Transportation
Packing
Discounts

the final payable amount should be displayed.

Then:

Proceed to Payment

18. PROMOTIONAL OFFERS & DISCOUNTS

Admin should have an option to activate/deactivate promotional offers.

Admin should be able to define:

- Product-specific discounts
- Percentage discount
- Fixed discount
- Promotional campaigns
- Coupon codes
- Start/end dates
- Eligible products
- Eligible customers, if required

When an offer is activated:

The discount should automatically reflect in the customer's billing/cart/checkout.

Admin to activate a normal promotional discount, whenever any events .

19. CANCELLATION & RETURN POLICY

Cancellation or return of the order is not allowed.

20. DAMAGE & REPLACEMENT POLICY

The website should have clearly visible:

- Damage Policy
- Replacement Policy
- Cancellation Policy

These should be displayed:

- During/near checkout
- In the footer
- On dedicated policy pages

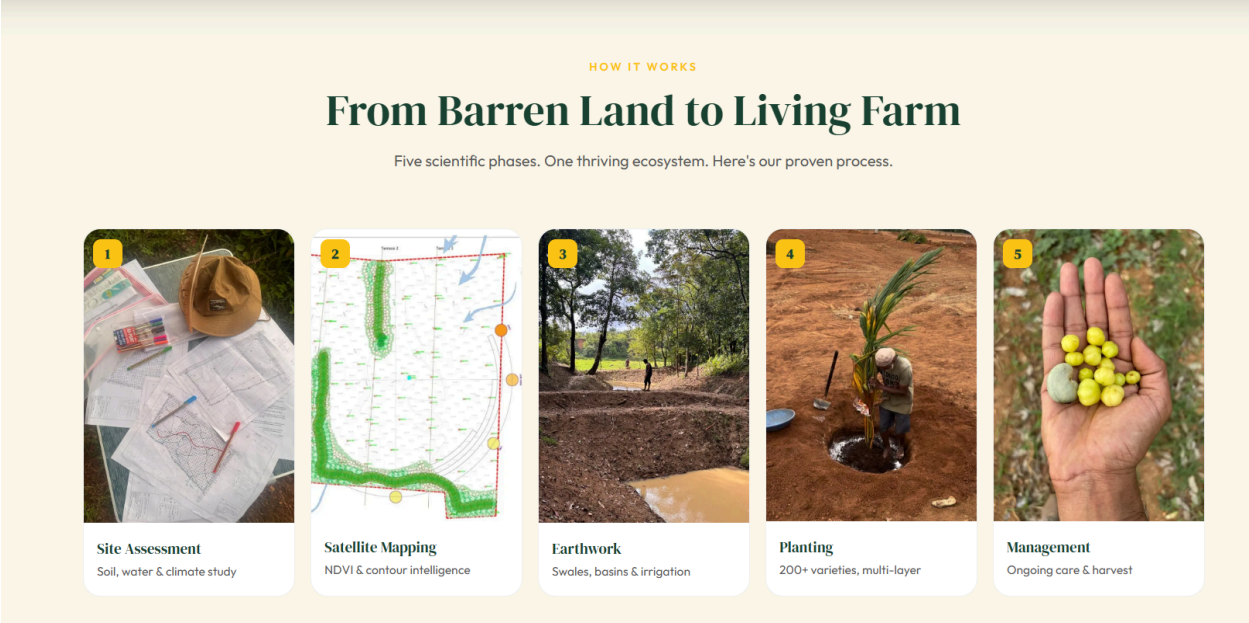

The final policy wording will be supplied/approved by Hasiru Agro.

21. FARM DEVELOPMENT SERVICES

Dedicated page:

From Barren Land to Living Farm

This section should follow the structure/content approach of the existing/old Hasiru Agro website where applicable.

21.1 SITE ASSESSMENT

Explain the site assessment process.

21.2 DESIGN

Farm design/planning services.

21.3 WATER MANAGEMENT & RAINWATER MANAGEMENT

Services related to:

- Water management
- Rainwater management
- Farm water planning

21.4 LAND PREPARATION / EARTHWORK

Services related to preparing the land before plantation.

21.5 PLANTING

Plant selection and planting implementation.

22. OUR WORK

The Farm Development page should contain an:

Our Work

section.

This should be based on the previous Hasiru Agro website/project information where appropriate.

Each project can display:

- Project images
- Location
- Land size
- Scope of work
- Before/after
- Project details

23. OUR CLIENTS

Display Hasiru Agro's clients/projects.

Information can include:

- Client name

Project type
Location
Acreage
Work completed

24. FARM DEVELOPMENT RESULTS

Under Why Choose Us / Farm Development, display **real data**.

Examples:

Total acres developed
Number of farms developed
Number of clients
Number of projects
Plants planted

The actual numbers should be supplied by Hasiru Agro.

25. BUILD FARM WITH US

CTA:

Build Your Farm With Us

Customer enquiry form:

Name
Mobile number
Business / Farmer
Number of acres : allow option starting minimum with 1 acre
Location
Expected development timeline
Requirement/details

Optional:

Farm photographs
Documents
Additional notes

Submission should create a **Farm Enquiry** in the Admin Panel.

26. INCUBATION / UASD DHARWAD

The same incubation information/logos displayed on the Home Page should also be available in the appropriate company/service section.

27. ABOUT US

Dedicated About Us page.

Sections:

Chemical Free

Explain Hasiru Agro's approach.

Certified Permaculture Designer

Display relevant certification information.

Vision

Hasiru Agro's long-term vision.

Mission

Hasiru Agro's mission.

All claims/certification information should be verified and supplied by Hasiru Agro.

28. DELIVERY & LOGISTICS ENGINE

This is an important backend/business-logic component.

The delivery calculation engine should consider:

Product variables

- Product weight

Product size
Quantity
Volume, if required

Customer variables

Location
Distance
Delivery zone

Vehicle variables

Vehicle capacity
Current utilisation
Remaining capacity

Order variables

Number of plants
Input products
Packing requirement
Delivery type

29. DELIVERY OPTIONS

At checkout:

A. Nursery Pickup

No transportation charge.

B. Bengaluru Delivery

Scheduled weekly delivery.

C. Outstation Delivery

Transportation calculated separately based on configured rules.

The customer should see the applicable charge **before making payment**.

30. ADMIN PANEL

The vendor should develop a separate secure Admin Panel.

30.1 ADMIN DASHBOARD

Dashboard should display key business information.

Sales

- Total sales
- Sales by period
- Sales by region

Orders

- Total orders
- Pending orders
- Completed orders
- Cancelled orders

Region

Dashboard should show:

Which regions are generating the most orders?

Possible views:

- State
- District
- City
- PIN code

Best Sellers

Display:

- Best-selling plants
- Best-selling products
- Quantity sold
- Revenue

Farm Enquiries

Display:

- New enquiries
- Pending enquiries
- Converted enquiries
- Closed enquiries

Low Stock

Display:

- Products below stock threshold
- Current stock
- Minimum stock
- Reorder requirement

30.2 INVENTORY / STOCK PAGE

Admin should be able to view:

- Product
- SKU
- Category
- Current stock
- Reserved stock
- Available stock
- Low-stock threshold
- Availability

30.3 PLANT MANAGEMENT

Admin should have a dedicated page to:

- Add plants
- Modify plants
- Delete/deactivate plants
- Change availability
- Change prices
- Add images
- Modify descriptions

Add categories
Add variants
Modify stock

30.4 PRODUCT AVAILABILITY

Admin should be able to mark products as:

Available
Out of Stock
Temporarily Unavailable
Coming Soon
Hidden

When a product is unavailable, the customer-facing website should reflect the status automatically.

30.5 PRODUCT CATEGORIES

Admin should be able to manage categories such as:

Timber Trees
Fruiting Trees
Other Plants
Compost
Seeds
Biochar
Vermicompost
Other inputs

Categories should be expandable in future.

30.6RECOMMENDATION MANAGEMENT

Admin should be able to manage the recommendations generated by:

Commercial
Food Forest
Miyawaki

For each model, Admin should be able to define:

Plants
Recommended quantity
Plant category
Spacing
Host plant
Biomass plant
Main plant
Related inputs
Biochar quantity
Vermicompost quantity
Associated video

This should preferably be **configurable through the Admin Panel**, rather than requiring the vendor to change source code for every recommendation update.

31. ADMIN ORDER MANAGEMENT

Admin should be able to:

View orders
View customer
View products
View quantity
View payment
View delivery
View transport charges
View packing charges
View discounts
Update order status

32. FARM ENQUIRY MANAGEMENT

Admin should be able to see:

Customer
Phone
Farmer/business
Location
Acres
Timeline
Requirement
Enquiry date

Status
Assigned person
Remarks

33. PROMOTIONS MANAGEMENT

Admin should be able to:

Create offer
Activate offer
Deactivate offer
Set discount
Select products
Set start date
Set end date
Set usage rules

Changes should reflect automatically on the customer-facing website.

35. CRITICAL BUSINESS RULES FOR THE VENDOR

The following should be explicitly included in the development scope:

Customer can purchase a single plant.
Customer can purchase multiple plants.
Customer can add plants outside the recommendation.
Plant recommendations depend on selected purpose.
Recommendation depends on land size and location.
Customer must verify phone number through OTP.
Recommendation page should display a 36 × 36 ft plantation diagram.
Plant quantity can be increased/decreased.
Input requirements should be calculated from selected/recommended plants.
Biochar and vermicompost requirements should be calculated.
Customer can choose nursery pickup.
Customer can choose delivery.
Bengaluru delivery follows scheduled weekly delivery.
Outstation transportation is calculated separately.
Transportation considers distance and weight.
Vehicle utilisation should be visible where applicable.
Remaining vehicle capacity should be shown.
Packing charges should be calculated separately.
Applicable GST/tax should be calculated.
Promotional discounts should be controlled from Admin.
Discounts must reflect automatically on billing.
Cancellation or return of an order is not allowed.
Inventory must update based on sales/orders.
Low-stock products should appear in Admin Dashboard.
Best sellers should be visible in Admin Dashboard.
Region-wise order information should be visible.
Farm enquiries should be managed separately from normal orders.
Recommendation models should be configurable.
Product availability should be controlled from Admin.

36. INFORMATION REQUIRED FROM HASIRU AGRO BEFORE DEVELOPMENT

The following should be provided to the software vendor before final development estimation:

Product Data

Plant catalogue

- Categories
- Images
- Prices
- Sizes
- Weight
- Stock
- Product descriptions

Recommendation Data

- Commercial model
- Food Forest model
- Miyawaki model
- Plant quantities
- 36 × 36 ft plantation design
- Host/main/biomass plant logic
- Spacing
- Input calculations

Calculator Data

- Plant calculator formulas
- Compost calculator formula
- Biochar calculation
- Seed calculation
- Vermicompost calculation

Logistics Data

- Vehicle capacity
- Vehicle types
- Weight limits
- Bengaluru delivery schedule
- Delivery zones
- Per-km charges
- Outstation rules
- Packing charges

Policies

- Damage policy
- Replacement policy
- Cancellation/return policy: cancellation or return of orders is not allowed.
- Refund rules: to reflect the no-cancellation/no-return policy.

Company Content

About Us
Vision
Mission
Why Choose Us
UASD Dharwad/incubation information
Logos
Certifications
Testimonials
Client information
Portfolio
DIY videos

37. CORE PRINCIPLE FOR DEVELOPMENT

The platform should not be built as a static website where every change requires the software vendor.

The following should be manageable by Hasiru Agro through the Admin Panel:

Products → Prices → Stock → Availability → Best Sellers → Recommendations → Discounts → Videos → Testimonials → Portfolio → Delivery Rules → Offers

This will allow Hasiru Agro to operate the e-commerce platform independently after the software vendor completes the project.

38. USER ACCOUNTS, AUTHENTICATION & SAVED PROFILES

Customer Sign-Up / Login: Secure login via phone number and OTP verification.
Order History: View past orders, track live order/delivery status, and download invoices.
Saved Land Profiles: Save multiple land locations, sizes, and purposes (e.g., "Main Farm - 5 Acres - Commercial") for quick re-ordering and repeat generation.

39. MULTI-LANGUAGE SUPPORT (ENGLISH & KANNADA)

Languages: English (Default) and Kannada with a prominent language toggle switch on the header/navigation bar.
Admin Management: Update static text, product names, and categories in both languages from the Admin Panel.

40. COMMUNICATION ENGINE (WHATSAPP & SMS INTEGRATION)

OTP & Alerts: Secure SMS/WhatsApp gateways for OTP verification, order confirmations, weekly delivery slot reminders, outstation tracking, and admin farm enquiry notifications.

WhatsApp Share: Quick-share options for recommendations and DIY videos.

41. PAYMENT GATEWAY & GST-COMPLIANT INVOICING

Payment Gateways: Integration with Razorpay, PhonePe, or Cashfree supporting UPI, cards, net banking, and wallets.

GST-Compliant Invoices: Automated B2C and B2B invoices with custom GSTIN input support for corporate/commercial clients, breaking down CGST, SGST, and IGST correctly.
